**V. J. Taylor, H. A. Babb : Making and Repairing Wooden Clock Cases** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Making and Repairing Wooden Clock Cases:

Johnson I found this book to be filled with valuable lost arts in restoring and preserving antique clocks. The author does not really give any exacting clock plans but gives you many helpful tips and basic woodworking techniques for making authentic antique clocks. You will not find any tacky quartz battery junk here as you do in most other misleading titles. 2 of 2 people found the following review helpful. Disregard the purists comments from others. By Mario Pretty sure I'm going to love this book. If it disappoints I will re-review it. In adding clock case making to my repertoire, I have noticed a few negative reviews here and there from people that are apparently versed in horology. The mechanical movements are endearing, and I am a fan of regulator style clocks in particular, but I am surprised at

the comments against quartz movements. I think the fairer criticism should be against the mass produced clock cases from nearly every manufacturer over the decades. They are often ridiculously substandard in woodworking quality, especially in the finish department. That is what better clock case making books address. I would much rather have a dependable quartz movement and an especially well made case than a \$300 clock movement in a two dollar case, simply because it says Howard Miller on the dial. If you're a professional wood worker (I'm a professional Luthier of 21 years) and are contemplating clock making (clock case making for the purists here) I would grab this book and any others that free up your creative energy - then make some really nice clocks. Don't let negative gear heads keep you from a really enjoyable craft. 2 of 6 people found the following review helpful. SatisfactionBy Joseph B. WhitbyI needed to access the information contained in the above book. I found the contents satisfied my requirements. I am very grateful to for the way they quickly organised the supply to my address.

Fix doors, joints, panels, moldings, veneering, marquetry, inlays and bandings, lacquer work, finishes, and even gilding. Or, re-create the beauty of traditional clock cases by designing and constructing your own--you'll find plans for everything from cuckoo and mantel clocks to long-cases, and 13 different historically accurate hood types. Specialized workshop techniques such as twist turning, making curved moldings, laying veneers, and crossbanding are fully explained and comprehensively illustrated. 192 pages, 110 b/w illus., 8 x 10 1/2.
